Forecast for Monday 26 Apr 2021

Weather: Any early mist and low cloud, mainly to the east and northeast will quickly lift and disperse leaving a dry and sunny morning. Occasional areas of thin high cloud may make the sunshine hazy at times through the day, but it will remain dry through the evening.

Chance of cloud free mountain/hill tops above 600m: 60% around dawn, soon improving to 100% with cloud remaining clear of summits through the rest of the day.

Visibility: Generally excellent with good clarity and clear views of distant hills, however lifting mist around dawn may bring briefly poor visibilities, with views of nearby hills briefly obscured, and with some areas of cloud on slopes around 600-700m before 9am across the east and northeast of the Beacons.

Forecast for Tuesday 27 Apr 2021

Weather: Cloudy during the early hours with the odd spot of rain around dawn. The cloud will break mid-morning onwards with scattered showers developing. The odd sharp shower is possible in the afternoon, and during the evening the showers may give some longer spells of rain in places, and with sleet falling on the highest summits in the evening.

Maximum wind: Northeasterly 15-20mph.

Chance of cloud free mountain/hill tops above 600m: 100% becoming 70% during the early hours, then improving to 90% mid-morning onwards. Deteriorating to generally 40% or less during the evening.

Visibility: Good at first, but deteriorating during the early hours as areas of cloud lower to cover slopes above 700-800m and with patchy rain and showers making across valleys appear rather misty. Improving to generally good by mid-morning as cloud lifts and breaks, leaving only patches near 800m in showers. Deteriorating again in the evening as more extensive areas cloud of develop on slopes above 600m, and with very poor visibility in any summit sleet.

Temperature: **Valleys:** Plus 5 Celsius becoming plus 11 Celsius.
At 600m: Plus 7 Celsius becoming plus 3 Celsius.
Freezing level: 1400m becoming 900m.
